📃 **Newbi question**

Hi,

first of all I´d like to appologise for my English, but I´m from Portugal and not very good at it.

I downloaded AD-Aware SE Retail, but after installing it Kaspersky AV identifies the program as "Backdoor.Win32,rbot.gen".
So I´d like to ask the gurus of this newsgroup the following question: Is it possible that a program like this came infected from the vendor? What does this virus do?.

I deleted all files that were infected and conducted another scan which came out o.k.

Thank You

D.A.

P.S.: My e-mail is invalid. I´m affraid of spam 😣

I once had a virus detector tag a file editor written in 1992, giving some fancy name to a "virus" saying that it was a key logger.

There was a key logging routine in the editor for writing macros.

BTW, your English is fine.
